

VBox Manager Problem after upgrade to version 3.0.8

The following screen shots were taken from the running system on 18. October 2009

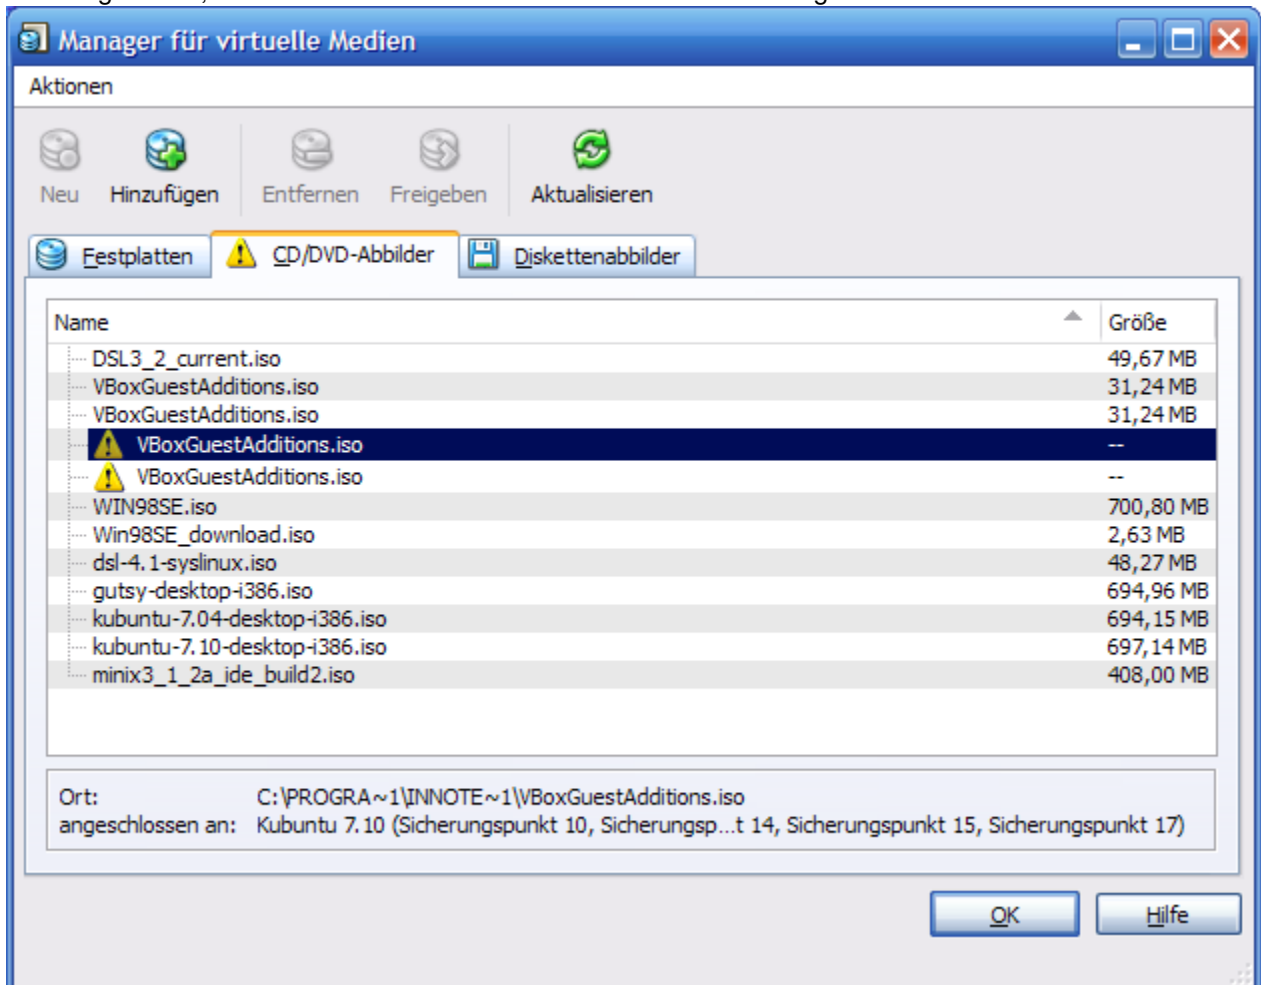

With a VBox running on a host system Microsoft Windows XP Sp 3 and the latest updates of 16. October 2009, the following problem occurred. I hope you could find a solution to solve this problem.

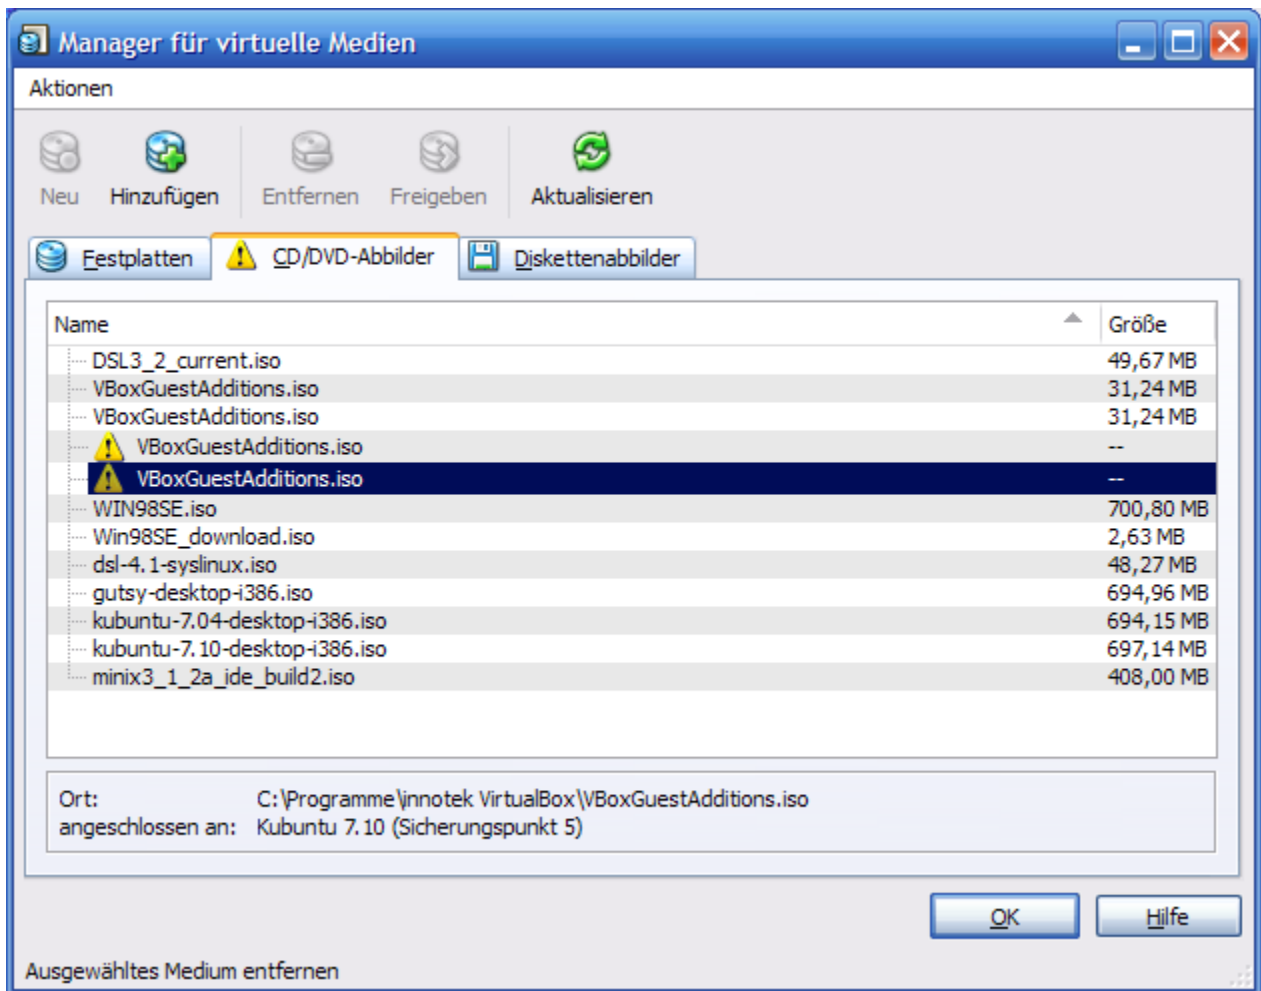

1. Every time we start the VBox Software we get the following Warning Message displayed.

2. When we following the the button "check" we get displayed the follwing VBox Manager Dialog. We would like to delete the lines with the warning symbol, but there is no way to do this.

An explanation of what caused this problem is, wehave update VBox Software from version 2.4 to 3.08 as recommended. Within this process the old versions of the VBoxGuestadditions.iso is beeing deletet, but there are no correction done to the VBox Manager files.

3. Please could you help, so that the whole VBox package is without a fault.

Thank you, greetings

Karl Walser
